Trip Line & Anchor Marker Buoy

Wherever anchors are used this buoy is required gear. As the anchor is dropped, the tripline Anchor Buoy with its 100ft. line goes with it. One end of the buoy line is attached to the trip shackle of the anchor; the buoy rises to the surface, unwinding as it rises. At the surface it is tied off in the cleat that is built into the buoy-marking the anchor spot and ready to trip the anchor when needed.

The buoy is manufactured of the toughest resilient foam available, bright orange in color complete with 100 ft. of black weather-resistant line of 800 lbs. breaking strength.

Model #1204, 6 per carton, Shipping wt. 7 lbs.

Tide Master

ANCHORING SYSTEM for CHANNEL MARKERS and REGULATORY BUOYS

Designed for use where minimum drift anchoring is required—The new Jim Buoy Tide master Anchoring System will help to stabilize and maintain position for all Jim Buoy Channel Markers and Regulatory Buoys with minimum drift to either side during tidal movement and current flow.

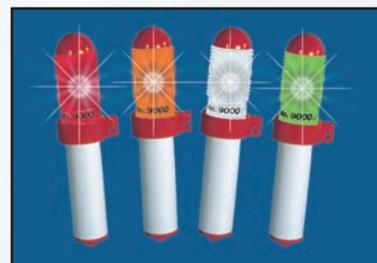

How it works: The unique design, (see sketch) incorporates a stainless steel cable (1), that is attached to the buoy anchor (2), and then passes through the stainless steel bracket/ pulley assembly hooked to the base of the buoy (3). The other end of the cable is fastened to a 40 lb. counterweight (4). During actual use, the counterweight shifts up and down in response to tidal movements and current flow and the buoy's position remains relatively unaffected. *Please call for complete details and pricing information.*

Counterweight shifts up and down to maintain buoy position during tidal changes.

#9000-1, Stainless steel mounting rack.
#9000-2, Theft deterrent cable.

Features Include:

- 1 Mile visibility
- 9000-X 40 milliseconds per flash, 30 flashes per minute
- 9000-XSB steady burn-no flash
- All available white, green, amber or red LED
- Uses 3 D-cell batteries, solar controlled
- Available to mount on all channel and regulatory buoys

Buoy and Utility Lights 9000-X and 9000-XSB
